Govern your AI future

iru

Accelerating AI adoption is exposing a critical governance gap, and AI-mature companies are doubling down on visibility and control.

Iru comprehensively surfaces every AI app across your organization. In tandem, teams scale AI productivity with intuitive controls that enforce secure guardrails. Behind the tool, Iru AI is your co-pilot in every decision.

> “ Iru is helping our endpoint security infrastructure to be the best it possibly can be.

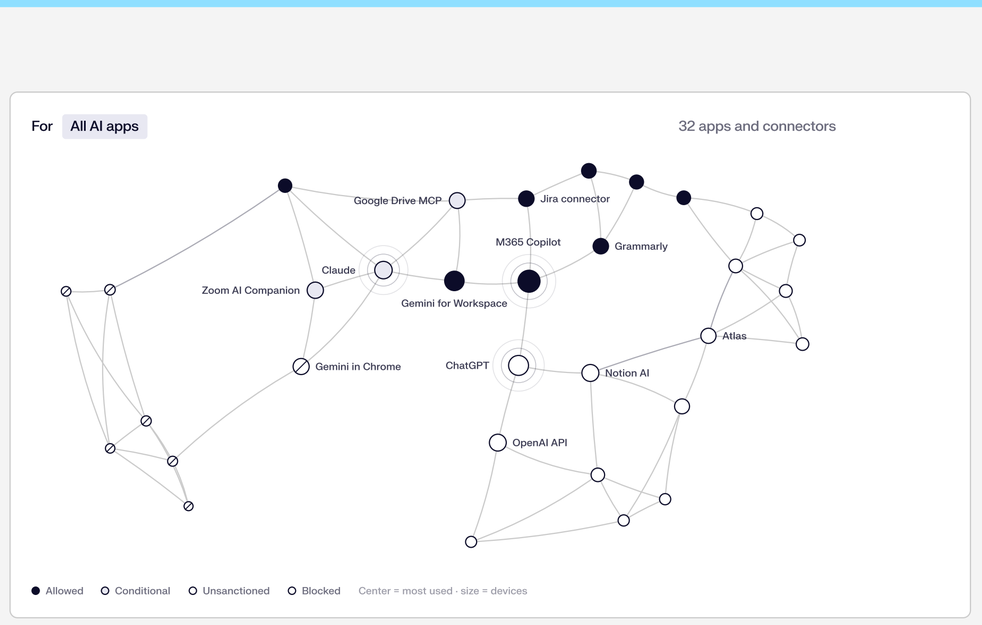

Christian Corrales

Senior Security Engineer, Varo Bank

Future-proof your AI ecosystem. Iru uses intelligent awareness and enforcement to turn AI adoption into your growth advantage.

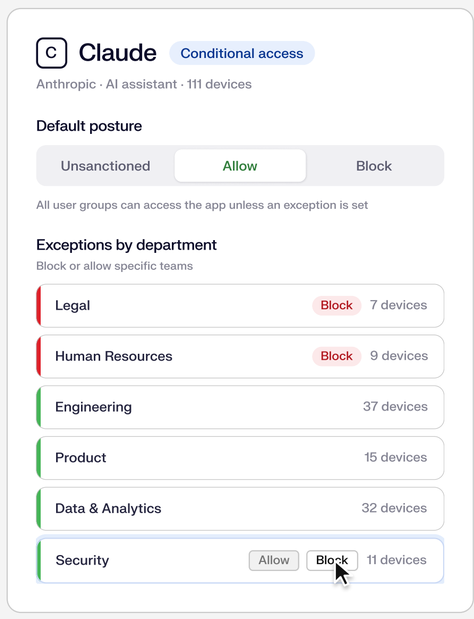

Discover every tool, web or desktop

Chart every AI application and drill into specific usage segments. Color coding separates sanctioned tools from unsanctioned ones.

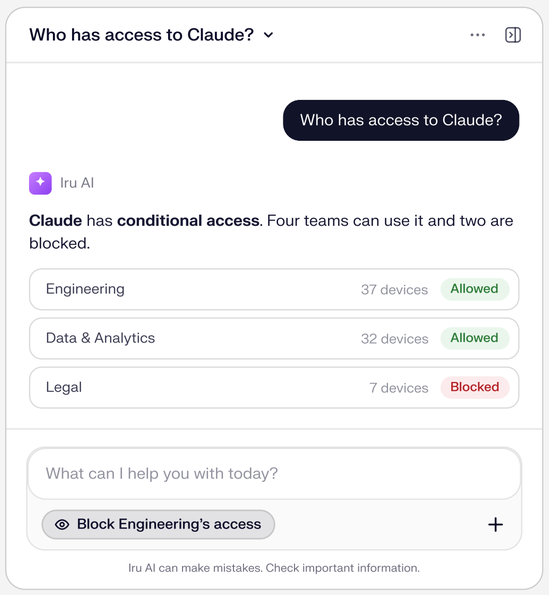

Govern access dynamically

Configure desktop and web app access based on individual devices and/or user department parameters. Intuitive controls make policy changes quick, so access keeps pace with your organization.

Orchestrate with Iru AI

Create personalized reports and deploy AI access policies with an intelligent assistant. Iru AI applies settings on your behalf, so decisions turn into action faster.

Close every security gap through the power of a unified device management and AI governance platform.

Block Shadow AI

Find the AI apps, coding agents, CLIs and MCP connectors on every managed device, then block any tool you haven’t approved.

Control AI’s permissions

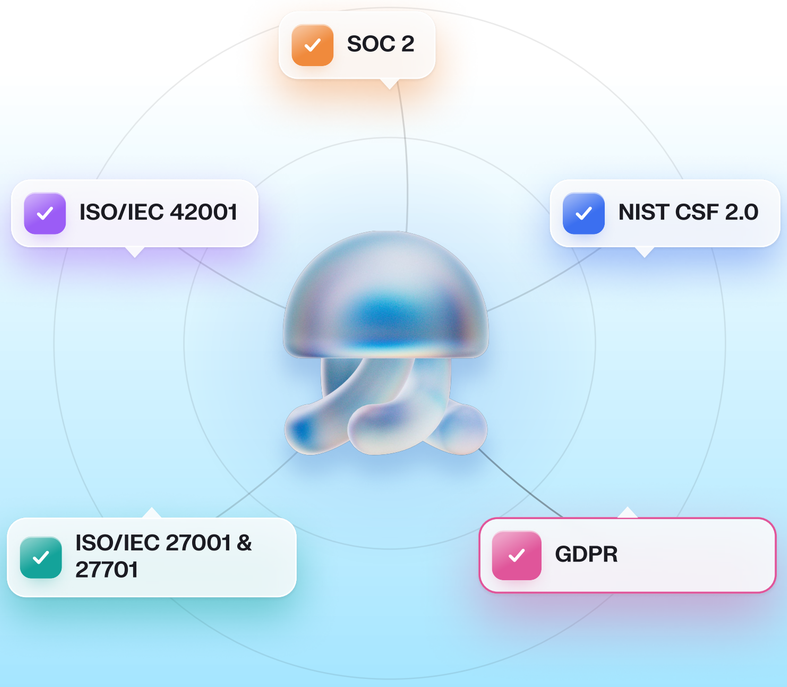

Govern AI permissions at the device level: audit privacy permissions, lock down sensitive privileges, and block unauthorized screen recording.

Manage OS-native AI

Manage built-in AI at the OS level: block external provider handoffs, restrict native generative tools, and enforce enterprise sign-ins.

Stay ahead of compliance

ISO/IEC 42001 asks organizations to show how they govern AI use. AI Governance keeps that record: every AI tool found on your managed devices, and every Allow or Block decision with who made it and when. Compliance Automation adds AI-tailored controls for ISO/IEC 42001, SOC 2 and ISO/IEC 27001, so your AI policy and your audit prep run on the same platform.
